Define the Problem Statements

Date	31 January 2025
Team ID	Individual Project
Project Name	Book - A - Doctor
Maximum Marks	2 Marks

PS-1

I am: A patient seeking medical consultation.

I'm trying to: Find suitable doctors and book appointments online quickly and conveniently.

But: The process of finding available doctors and scheduling appointments is often time-consuming and confusing.

Because: Most healthcare facilities rely on manual appointment systems, and information about doctors is not easily accessible in one place.

Which makes me feel: Frustrated, delayed in receiving medical care, and inconvenienced by the lack of a streamlined booking process.

PS-2

I am: A doctor managing patient consultations and appointment schedules.

I'm trying to: Organize and manage patient appointments efficiently.

But: Handling appointment requests manually can lead to scheduling conflicts and increased administrative workload.

Because: There is no centralized platform to track appointments, patient details, and consultation schedules.

Which makes me feel: Overwhelmed, less productive, and challenged in providing efficient healthcare services.

Selected Problem Statement

Patients and doctors face challenges in managing healthcare appointments efficiently due to the absence of a centralized digital platform. Patients struggle to find doctors and schedule appointments conveniently, while doctors experience difficulties in organizing and tracking appointment requests. The proposed **Book A Doctor** system aims to solve these issues by providing a web-based healthcare appointment management platform that enables doctor discovery, online appointment booking, appointment tracking, secure authentication, and medical report management.
